Dated: 05/02/2022

TO WHOMSOEVER IT MAY CONCERN

This is to certify that Riya Mohanty, aged 9 years is a child with beta thalassemia major which is a blood disorder requiring regular blood transfusion for survival.

Since she has a normal younger sibling, Divyanshi Mohanty; HLA typing of both the children will be advisable to check if they are HLA matched to go ahead for Bone marrow transplantation for Riya, which is the curative therapy for thalassemia.

Further, incase the siblings are not HLA matched, parents HLA typing could also be done.

This Certificate is issued at the fathers request to produce at his workplace.
